Specification Sheet for 458 SOCOM Suppressor

Model: Goliath

Caliber: 458 SOCOM

Weight: 20 ounces

Diameter / Length: 2" x 10"

Material: Titanium tube / Titanium core

Coating: Type C Cerakote - Black

Attachment: Inserted Adapter System (5/8-32 Insert and 5/8-24 Insert supplied)

Approx. DB Reduction: 28- 36dB

Description: The Goliath is the result of user requests for a silencer that is light and quiet while handling the mighty 458 SOCOM. The strength associated with Grade 5 titanium makes it a perfect choice for this application. Now, the hunter as well as the tactical SBR carbine enthusiast can take advantage of the performance of the 458 SOCOM round while still enjoying the protection a silencer provides. This silencer is mounted via a thread adapter system which is currently offered in both 5/8-32 and 5/8-24, and is easily adapted to other thread patterns such as 11/16-24 and 3/4-24, allowing it to fit virtually any gun thread available.

Cleaning procedure for sealed silencers

Liberty Suppressors makes several sealed rifle silencers, including the Sovereign, Triumph, Goliath and Zulu integral. These silencers do not require cleaning by the end user, due to the nature of high pressure, high heat rifle rounds. Most carbon is either burned out entirely, or pushed out the end of the silencer as a part of the escaping gas column. What little is left doesn't close up the baffles, and as such is no danger to the user.

We do offer free disassembly and cleaning for any of these sealed silencers if it's been shot enough to meet our criteria. Our criteria is when the silencer reaches 150% of its original weight, due to the carbon filling it in. This means that if the silencer weighed 12oz at the time of sale, then we will clean it for you once it reaches 18oz. Most shooters never fire enough through the same suppressor to require cleaning.

Otherwise, the silencer can simply be installed and used, with no further maintenance needed.

Thank you for choosing Liberty Suppressors!
