Coating: Type C Cerakote - Black

Attachment: 5/8-24 Thread mounted

Approx. DB Reduction: 24 - 30dB

Description: The Chaotic TI is the result of user request for a version of the Chaotic that is lighter but also has to handle all the same calibers as the original Chaotic. The strength associated with Grade 5 titanium makes it a perfect choice for this application. Now, the hunter as well as the tactical SBR carbine enthusiast, has a lighter alternative to the original Chaotic. Due to the strength associated with the titanium we use in this design we are able to rate this silencer for the 300 Win Mag cartridge as well.
