MYSTIC DISASSEMBLY INSTRUCTIONS

First, remove the suppressor from the weapon.

Remove any attachments from the rear of the suppressor module. Second, remove the tube retaining ring from the rear of the suppressor module.

At this point, it helps to wet the inside of the core with some penetrating oil such as Kroil Oil. This will drastically help in removal of components.

Push the core assembly out of the tube by using the disassembly tool (sold separately) or a wooden dowel.

Clean the core with normal solvents, ultrasonic cleaners, or sand blast the core. If you do sand blast the core, be sure to protect the rear and the front of the core using electrical tape or something similar.

Reassemble in reverse order, be sure to align the wavelok with the feature on the tube during reassembly. Also, apply some anti-sieze or lube of your choice to the parts to prevent galling of the threaded surfaces.

Thank you for your choice of a Mystic by Liberty Suppressors!
